ON THE MESOMORPHIC β -FORM OF POLYCAPROIC AMIDE AND ITS TRANSFORMATION INTO THE CRYSTALLINE α -FORM. June 60, 15p. 10 refs. Order from SLA ml\$2.40, ph\$3.30 61-10214

The mesomorphic β -structure of polycaproic amide and the conditions for its transformation into the crystalline form α were investigated by means of roentgenographic, spectrophotometric and polarizing microscope methods. The equatorial reflection $d = 4.2 \text{ \AA}$, typical for the β -form in the X-ray diagram, is related to the 10.22μ absorption band, and the reflections due to planes (200) and (002) in the crystalline α form correspond to the 10.42μ band. The transformation $\beta \rightarrow \alpha$ was followed under various conditions in dependence on the intensity changes of these reflections and absorption bands.
